RECYCLE-It's the Law!

Session Law 2010-67 established an electronics recycling program for the State of North Carolina with shared responsibility between manufactures, retailers, local and state government, and consumers.

Televisions, computers, monitors, printers, scanners, etc. are banned from disposal in landfills.

Get the Facts about Electronics Recycling!

Harmful Materials in Electronics

Used electronics, such as computers, televisions, and cell phones contain potentially dangerous chemicals and heavy metals and should not be placed in the regular trash.

Television and computer monitors contain **cathode ray tubes** (CRTs), which have high concentrations of **lead**.

Circuit boards contain heavy metals such as **cadmium**, **mercury**, and **chromium**.

An estimated **70%** of the overall toxic materials in landfills is comprised of electronic waste.

The problem with cell phones...

- The average life span of a cell phone is only 18 months.
- About half a billion obsolete and unused cell phones could end up in our landfills.
- Translation...this would release roughly 312,900 pounds of lead into landfills.

Donate your cell phone today!

Many organizations and domestic violence prevention facilities accept cell phone donations. Working cell phones can be used to dial 911, even without an active telephone account. Consider donating to this local facility.
